

ALAMO Engineering is a dynamic EASA Part 21J Design Organisation specializing in aircraft modification and integration projects. As a growing aerospace company, we offer technically demanding projects where innovation, certification and practical solutions come together.

YOUR KEY TASKS

- Act as the primary contact for civil aviation authorities on Design Organisation (DOA) and general certification matters.
- Provide airworthiness and certification support across the Design Organisation.
- Develop certification plans, coordinate approval activities and prepare change approval documentation.
- Support compliance demonstration documentation to ensure regulatory compliance and certification acceptance.
- Work on diverse aviation projects with opportunities to deepen your Part 21J expertise in a collaborative environment with short decision paths.

YOUR REQUIREMENTS

- Degree in Aerospace Engineering or equivalent technical qualification, with several years of experience in aircraft engineering, manufacturing or flight operations engineering.
- At least 2 years of experience in aircraft certification and airworthiness.
- Strong knowledge of EASA CS-23/25, FAR Part 23/25.
- Sound judgment, strong communication skills and the ability to resolve complex certification challenges while working effectively with authorities, customers and multidisciplinary teams.
- An excellent command of English; German skills are an advantage.

WHAT TO EXPECT

- A supportive team with short decision paths and an open working atmosphere.
- Structured onboarding with a mentor and tailored training opportunities.
- An international, family-like environment where your ideas make a difference.
- Flexible working arrangements, performance-related pay and bonus scheme.
- 30 days' annual leave plus additional days (e.g. Christmas Eve, New Year's Eve). In-house canteen, employee assistance programme and employer's contribution to retirement insurance.
