

ALAMO Engineering is a dynamic EASA Part 21J Design Organisation specializing in aircraft modification and integration projects. As a growing aerospace company, we offer technically demanding projects where innovation, certification and practical solutions come together.

YOUR KEY TASKS

- Develop avionics and electrical system integration concepts for aircraft modification projects, from concept to approved design data.
- Prepare compliance and certification documentation in accordance with EASA Part 21J requirements and ALAMO's approved Design Organisation procedures.
- Collaborate with customers, Compliance Verification Engineers, Office of Airworthiness, production and maintenance partners to deliver practical, certifiable solutions.
- Work on varied aviation projects with opportunities to expand your technical and Part 21J expertise in a collaborative environment with short decision paths.

YOUR REQUIREMENTS

- Degree in Aerospace or Electrical Engineering (or equivalent) with several years of experience in avionics, electrical systems or development aircraft integration.
- Proficiency in electrical design and wiring/harness development tools such as Capital (Siemens/Mentor Graphics) or equivalent CAD systems, as well as standard MS Office applications.
- Good understanding of aircraft certification and airworthiness requirements.
- Strong communication and teamwork skills, customer-oriented mindset and the ability to manage multiple priorities with focussing on continuous improvement.

WHAT TO EXPECT

- A supportive team with short decision paths and an open working atmosphere.
- Structured onboarding with a mentor and tailored training opportunities.
- An international, family-like environment where your ideas make a difference.
- Flexible working arrangements, performance-related pay and bonus scheme.
- 30 days' annual leave plus additional days (e.g. Christmas Eve, New Year's Eve). In-house canteen, employee assistance programme and employer's contribution to retirement insurance.
